Abstract

Brief summary of what this paper is about.

Introduction

What is reproducibility?

Reproducibility in this context means obtaining consistent results using the same input data, calculation steps, methods, and codes, and the same analysis conditions. This definition is synonymous with “computational reproducibility” and the terms are used interchangeably in this report. [1]

Methods

How was the topic handled? Maybe GitHub¹ was one of the instruments used.

¹<https://github.com/>

Results

Here it is: A template for reproducible research.

Discussion

Not everything that glitters is gold. What are the limits of the subject? What is still to be done?

Conclusions

We are on a good path but not yet finished.

References

Quarto will include the references here. The position of the reference-list can therefore be adjusted by moving the inclusion of this file within `index.qmd`.
